ELECTRIC POWER SYSTEMS RESEARCH

Subject Index of Volume 31

AC–DC power systems
  a heuristic linearized line outage contingency ranking of integrated multiterminal AC–DC power systems, 1
Algorithm convergence
  investigation of factors causing slow convergence in Newton optimal power flow, 153

Contingency analysis
  a heuristic linearized line outage contingency ranking of integrated multiterminal AC–DC power systems, 1
Control strategies
  control adjustments in fast decoupled load flow, 185
Control systems
  microprocessor based static reactive power compensators for unbalanced loads, 51
Customer interruption costs
  effects of adverse weather conditions and higher order outages on customer interruption costs in electric subtransmission systems, 195

Data processing
  an algorithm for frequency relaying based on the Newton–Raphson method, 119
Distribution system reconfiguration
  a survey of the state of the art in distribution system reconfiguration for system loss reduction, 61

Energy management
  application of computer software in transmission expansion planning using variable load structure, 13

Fault detection
  performance of high-impedance fault detection algorithms in long-term field trials, 71
Filters
  performance comparison of single-phase active power line conditioners for harmonic suppression and reactive power compensation, 137
Frequency relaying
  an algorithm for frequency relaying based on the Newton–Raphson method, 119

Genetic algorithms
  optimal sectionalizer allocation in electric distribution systems by genetic algorithm, 97
  short-term load forecasting by a neural network and a refined genetic algorithm, 147
Grounding planning
  a multiobjective optimization approach to loading balance and grounding planning in three-phase four-wire distribution systems, 163

Harmonics
  computer based harmonic simulation and testing for directional-overcurrent relays, 125

Induction machines
  modeling and performance of a 120° square wave inverter/induction machine drive, 21
  static power conversion from three-phase self-excited induction and reluctance generators, 111
  applications of the current state space model in analyses of saturated induction machines, 203
Insulation ageing
  developments in computational methods for transformer cyclic loading evaluations, 175
Inverters
  modeling and performance of a 120° square wave inverter/induction machine drive, 21

Lightning
  modified Fourier transform lightning surge analysis of an overhead line–underground coaxial (CV) cable system, Part I: modal analysis of underground cables and overhead lines and effect of subterranean water on cable modal propagation characteristics, 31
  modified Fourier transform lightning surge analysis of an overhead line–underground coaxial (CV) cable system, Part II: system lightning surge response, 43
Load balance
  a multiobjective optimization approach to loading balance and grounding planning in three-phase four-wire distribution systems, 163
Load flow
  control adjustments in fast decoupled load flow, 185
Load forecasting
  short-term load forecasting by a neural network and a refined genetic algorithm, 147

Magnetic fields
  a novel magnetic field management method for underground power cables, 103
Marginal outage costs
  evaluation of the marginal outage costs in composite generation and transmission systems, 79
Modal analysis
  modified Fourier transform lightning surge analysis of an overhead line–underground coaxial (CV) cable system, Part I: modal analysis of underground cables and overhead lines and effect of subterranean water on cable modal propagation characteristics, 31
  modified Fourier transform lightning surge analysis of an overhead line–underground coaxial (CV) cable system, Part II: system lightning surge response, 43

Elsevier Science S.A.

Negative-sequence current reduction
microprocessor based static reactive power compensators for unbalanced loads, 51
Network configuration
application of computer software in transmission expansion planning using variable load structure, 13
a survey of the state of the art in distribution system reconfiguration for system loss reduction, 61
Neural networks
short-term load forecasting by a neural network and a refined genetic algorithm, 147

Optimal power flow
investigation of factors causing slow convergence in Newton optimal power flow, 153
Optimization techniques
a multiobjective optimization approach to loading balance and grounding planning in three-phase four-wire distribution systems, 163

Power compensation
performance comparison of single-phase active power line conditioners for harmonic suppression and reactive power compensation, 137
Power conversion
static power conversion from three-phase self-excited induction and reluctance generators, 111
Power factor correction
microprocessor based static reactive power compensators for unbalanced loads, 51
Power line conditioners
performance comparison of single-phase active power line conditioners for harmonic suppression and reactive power compensation, 137
Power loss minimization
a survey of the state of the art in distribution system reconfiguration for system loss reduction, 61
Power system economics
application of computer software in transmission expansion planning using variable load structure, 13
evaluation of the marginal outage costs in composite generation and transmission systems, 79
effects of adverse weather conditions and higher order outages on customer interruption costs in electric subtransmission systems, 195
Power system protection
performance of high-impedance fault detection algorithms in long-term field trials, 71

Relay protection
performance of high-impedance fault detection algorithms in long-term field trials, 71
computer based harmonic simulation and testing for directional-overcurrent relays, 125
Reliability evaluation
evaluation of the marginal outage costs in composite generation and transmission systems, 79
effects of adverse weather conditions and higher order outages on customer interruption costs in electric subtransmission systems, 195
Reluctance machines
static power conversion from three-phase self-excited induction and reluctance generators, 111

Saturation modeling
applications of the current state space model in analyses of saturated induction machines, 203
Sectionalizer allocation
optimal sectionalizer allocation in electric distribution systems by genetic algorithm, 97
Security analysis
a heuristic linearized line outage contingency ranking of integrated multiterminal AC–DC power systems, 1
Self-excited generators
static power conversion for three-phase self-excited induction and reluctance generators, 111
Sensitivity techniques
applications of the energy based sensitivity method to fast transient control, 87
Signal processing
performance of high-impedance fault detection algorithms in long-term field trials, 71
Simulated annealing
a multiobjective optimization approach to loading balance and grounding planning in three-phase four-wire distribution systems, 163
Simulation techniques
modeling and performance of a 120° square wave inverter/induction machine drive, 21
computer based harmonic simulation and testing for directional-overcurrent relays, 125
Spot pricing
evaluation of the marginal outage costs in composite generation and transmission systems, 79
Static reactive power compensators
microprocessor based static reactive power compensators for unbalanced loads, 51
Switching operations
a survey of the state of the art in distribution system reconfiguration for system loss reduction, 61

Torque
modeling and performance of a 120° square wave inverter/induction machine drive, 21
Transformers
developments in computational methods for transformer cyclic loading evaluations, 175
Transient stability
applications of the energy based sensitivity method to fast transient control, 87
Transmission expansion planning
application of computer software in transmission expansion planning using variable load structure, 13
Transmission lines
modified Fourier transform lightning surge analysis of an overhead line–underground coaxial (CV) cable system, Part I: modal analysis of underground cables and overhead lines and effect of subterranean water on cable modal propagation characteristics, 31
modified Fourier transform lightning surge analysis of an overhead line–underground coaxial (CV) cable system. Part II: system lightning surge response, 43

Underground cables
modified Fourier transform lightning surge analysis of an overhead line–underground coaxial (CV) cable system, Part I: modal analysis of underground cables and overhead lines and effect of subterranean water on cable modal propagation characteristics, 31

modified Fourier transform lightning surge analysis of an overhead line–underground coaxial (CV) cable system, Part II: system lightning surge response, 43
a novel magnetic field management method for underground power cables, 103

Variable load structure
application of computer software in transmission expansion planning using variable load structure, 13

Voltage control
microprocessor based static reactive power compensators for unbalanced loads, 51

Weather modeling
effects of adverse weather conditions and higher order outages on customer interruption costs in electric subtransmission systems, 195
